

# RELOCATION

Our findings indicate that relocation often disrupts established travel patterns. However, this disruption also presents an opportunity to promote and support active and public transportation options.

# DROUGHT

Rising temperatures are increasing water demand. Our research revealed that drought and water restrictions not only strengthened water conservation efforts but also raised concern about climate change.

# COVID-19

Our research on the COVID-19 pandemic revealed significant shifts in everyday routines, particularly concerning food, work, and travel. These changes led to a notable reduction in carbon footprints.
